Used As Directed.
Formulated with ~
Enhanced Absorption Ingredients.**

GENERAL INFORMATION

ULTRA™ Nutritionals are crop specific compounds designed for foliar feeding as a complement to soil fertilization. Use and application should be programmed for inclusion in the spray program for disease, insect and/or weed control. **ULTRA™** Nutritional compounds contain high levels of premium quality, readily available primary, secondary and micronutrients. These nutrients are selected for use based on their rapid and efficient foliar absorption characteristics. Fulvic Acid is used as a complexing agent for micronutrients and as an agent for the utilization and translocation of phosphates. A proprietary blend of organic acids and amino acids is incorporated as the source of biostimulants.

DIRECTIONS FOR USE

ULTRA™ Nutritionals are compatible with most commonly used fungicides, insecticides and herbicides. A jar test is always recommended. **ULTRA™** Nutritionals are true aqueous solutions and will disperse in water with minimal agitation. Sufficient water should be used for thorough coverage of the foliage. Application is recommended early or late in the day for maximum absorption.

RECOMMENDED RATES

Spray rates of 1 to 8 quarts per acre are recommended based on growth stage of the crop and size of the canopy. Use lower rates early in the growing season, then increase rates according to growth stage and number of applications. Total application rate for the season should be a minimum of 4 quarts per acre.
